Proposal Summary (1–2 sentences)

This proposal activates non-locking staking (6% APY) for all unallocated RBNT in the DAO Treasury, turning idle tokens into a risk-free, instant-withdraw yield source. No budget requested, fully reversible, auditable monthly.

Problem & Rationale

A significant portion of the DAO's RBNT Treasury is currently idle. These tokens could generate stable, predictable yield without impacting liquidity.

The staking module is no-lock, meaning the DAO can unstake instantly whenever funds are needed.

Leaving RBNT inactive represents a loss of potential revenue, slows the DAO's autonomy, and weakens long-term reserves.

This proposal solves the problem by making staking the default state of RBNT until needed.

Objectives & Strategic Fit

Primary Objectives

Generate automatic revenue for the DAO with zero risk.

Improve long-term resilience of the Treasury.

Strengthen financial sustainability without requiring community activity or extra budget.

Strategic Fit with Working Groups

Redbelly Network

~~DAO-wide. aligns with sustainability & adoption goals.~~

Scope of Work & Deliverables

Scope

Stake 100% of unallocated RBNT in the official 6% APY no-lock module.

Maintain the ability to unstake instantly for any approved proposal.

Produce transparent monthly reports.

Deliverables

Activation of staking (Day 1).

Ongoing auto-staking: any unused RBNT gets staked immediately.

Monthly public report including:

RBNT staked

yield generated

unstake events

net treasury growth

Simple automated dashboard shared publicly (month 2).

Timeline

Week 1 → Activation

Month 1 → First report

Month 2 → Public dashboard

Monthly → Continuous reporting

Budget & Payment Structure

Total Budget: 0 USDT / 0 RBNT

No payment required.

Only minimal gas fees paid by the DAO multisig (routine operational cost).

No milestones producing payout → all deliverables performed voluntarily.

Compliance with Criteria:

No external spend

No RBNT rewards

No personal benefit

No compensation

No upfront payout

→ Automatically PASS for Budget Alignment.

Redbelly Network

~~Governance : Strengthens trust, show responsible treasury management~~

Strategic: Autonomous revenue source for the future proposals

Risk: Near-zero risk, no exposure , no volatility added

1. Direct Financial ROI

Staking at 6% APY converts idle RBNT into passive yield.

Examples:

100,000 RBNT → +6,000/year

500,000 RBNT → +30,000/year

1,000,000 RBNT → +60,000/year

Yield = pure net gain, no cost, no risk.

2. Net Treasury Growth (Compounding)

The DAO earns yield every month.

Yield compounds automatically.

3. Zero Liquidity Risk

No lock

Instant withdrawal

Funds always accessible for proposals

Zero operational constraints

The DAO maintains full flexibility.

4. Operational Efficiency

No maintenance

No active work

No cost

No third-party dependency

Minimal multisig execution

→ Highest ROI relative to effort.

5. Long-Term Sustainability

Strengthens DAO reserves

Reduces need to sell tokens

Redbelly Network

6. Positive Governance Signal

Shows the DAO:

is financially responsible

grows its treasury

manages assets professionally

increases partner confidence

OVERVIEW VOTES 11 DISCUSSION 7

Risk & Mitigation

Potential Risks

Operational errors during staking/unstaking

Need for urgent large unstake

Mitigation

Dual-signature multisig

Only unallocated RBNT is staked

Instant unstake ensures no liquidity problem

Full monthly transparency

Co-Funding & Leverage

Not required — but yield generation itself acts as internal leverage by expanding treasury capacity without cost.

Contribution Equity

No payouts requested

No compensation concentration

No conflict of interest

Compliance & Ethical Standards

No regulatory risk

Aligned with DAO Code of Conduct

Fully transparent, reversible, and responsible

Community Involvement

Proposal shared publicly for comments before voting.
